

O-RING **PROLUBE** By COOLSHIRT

COOLSHIRT SYSTEMS recommends regular inspection of O-rings and Lubrication every 15-30 days.

Visually inspect the O-rings and mating surfaces for dirt, nicks, cuts, scratches, lint, hair, and any signs of corrosion; these could cause the seal to fail. Clean the surfaces, and lubricate, & or replace the O-rings as necessary.

***Pro Lube o-ring lubricant will help extend o-ring life & make connection easier.*
