

FLEXI FREEZE ICE VEST

Congratulations on your purchase of the world's finest Cooling System

Freezing Ice Panels

Removable ice panels attach to the vest with Velcro for ease of use. For best results, place panels flat in freezer. Flexi Freeze ice will require approximately 12 hours to become fully frozen. If upon removal from freezer, individual cubes do not appear fully frozen, slightly tap the unfrozen cubes to facilitate crystallization and return panels to complete freezing. Remove panels from freezer and attach to vest when personal cooling is required. Ice panels should be stored in freezer when the vest is not in use to ensure panels are readily frozen

Ice panels attach with Velcro Strips

Ice Panels in Freezer

Fitting Ice Vest

Ice Vest is designed to fit sizes XS to 2XL. Vest can be adjusted at shoulders via the Velcro straps and also on the sides by adjusting the elastic cord. Excess elastic cord should be secured inside the Velcro flap on the front of vest for safety. A shirt should be worn underneath vest to avoid direct contact of ice panels with skin. Vest should be adjusted to fit so that ice panels are in full contact with body.

Elastic Cord Adjustment

Secure Elastic cord in Front Velcro Flap

Care of Vest

Remove ice panels prior to washing. Machine wash on gentle cycle - Do not use bleach (for vest results secure elastic cord in front velcro flaps before washing) Tumble dry on low setting. Do not iron - Do not dry clean.

Care of Ice Panels:

*Wipe clean with soapy water and soft cloth. Do not place ice panels in washing machine or dishwasher. Flexi Freeze Ice can be removed from ice panels if necessary by opening Velcro tabs on side of panels. Additional Flexi Freeze Ice Sheets can be purchased at **www.coolshirt.com***
